

Wide clearance between drum and inner box to reduce the likelihood of milled debris jamming the drum.

Electric over hydraulic controls on depth, tilt and side-shift functions.

"Optional profiler mounted or roof mounted water kit for dust suppression."

Outer edge of drum and outer pick holders are hard faced.

Supplied with high-pressure in-line filter to protect hydraulic motor.

Pick removing tool supplied with each profiler.

Door for easy access to milling drum.

Drum is supported via bearing on the opposite side to motor.

Optional safety rail and step

Drum fitted with self-sharpening milling picks for profiling or scrubbing. Optional stabilizing set-up also available

Nylon slide blocks fitted to side-shift plate for easy replacement.

Cutting widths of 450, 600, 750mm & 1000mm.

Profiler sits in six solid steel wheels when profiling for increased stability.

Duo-cone seal fitted to gearbox to minimize milled material damaging seal area.
